**Windows 8 requires driver signing. Windfreak Technologies drivers are not signed.**

This is how you disable the 'Driver Signature Enforcement' on Windows 8 which will allow you to install the Windfreak Tech driver:
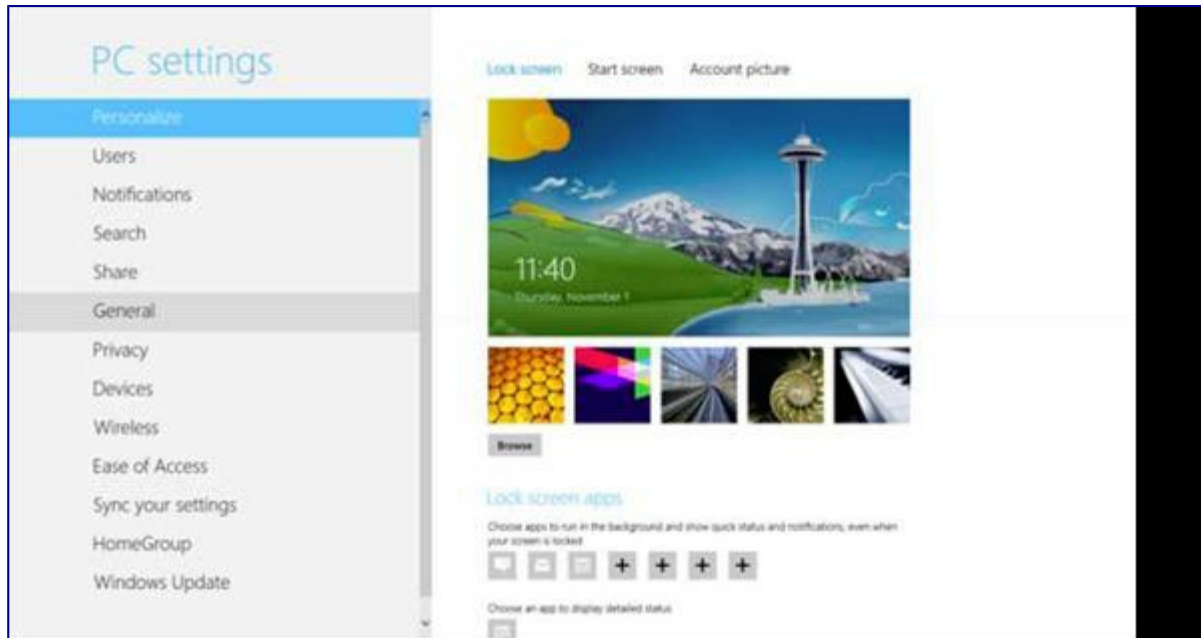

**Open the Charms Bar in Windows 8 and select "Settings":**

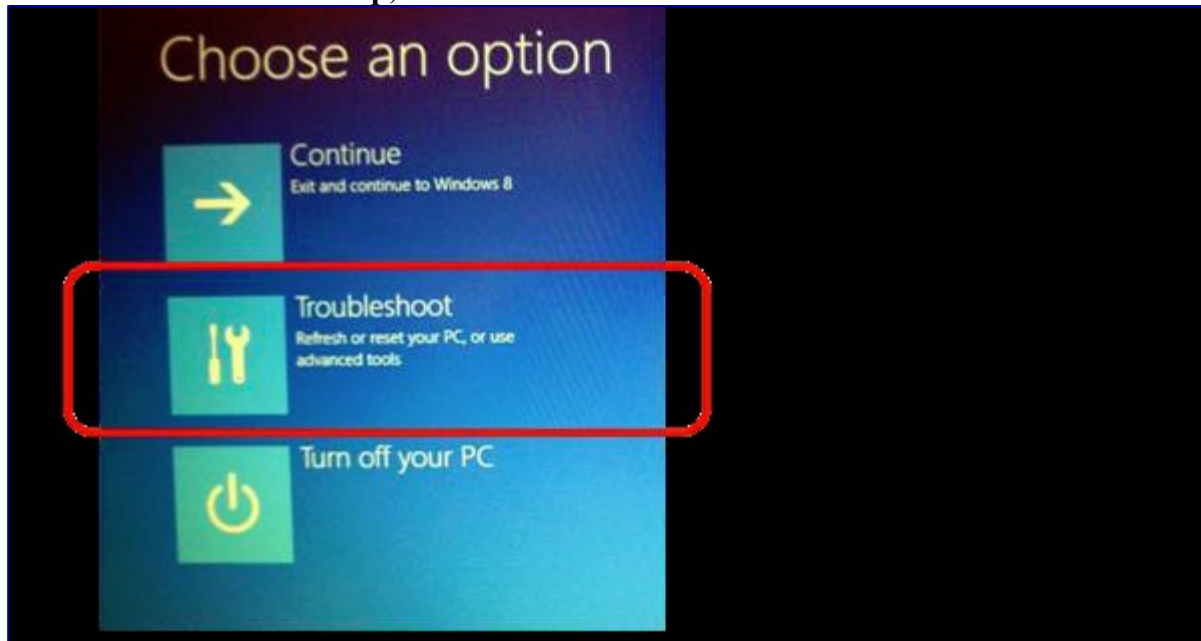

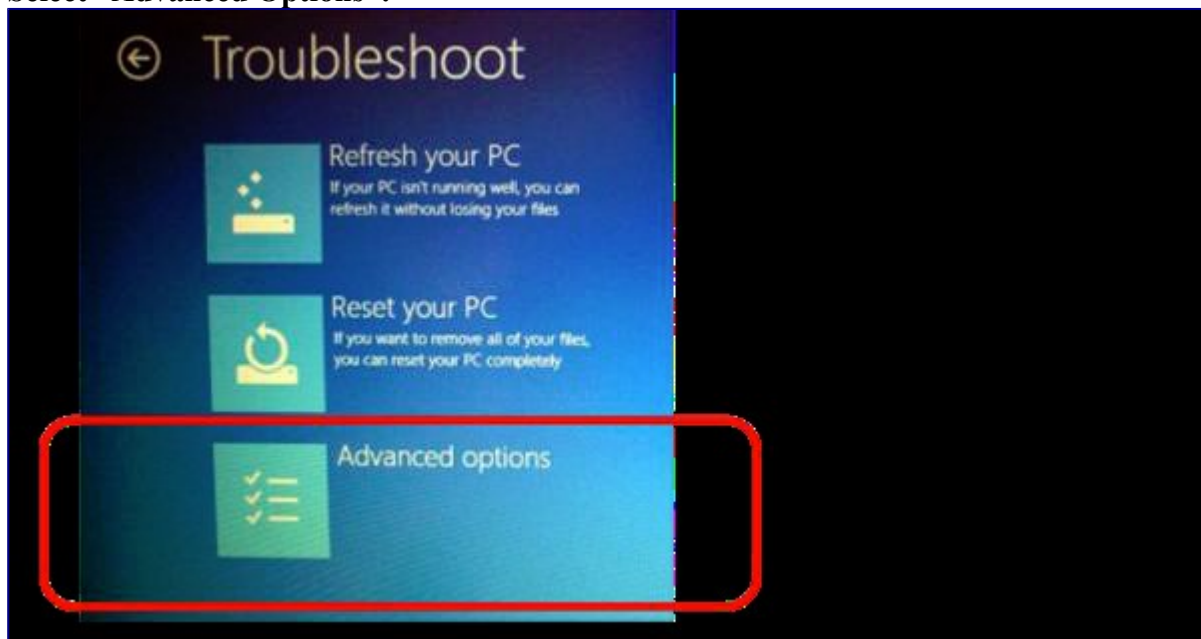

Select "Change PC Settings":

Select "General":

**Scroll to the bottom of the General page and select "Restart Now" under "Advanced Start-Up":**

Once the PC comes back up, select "Troubleshoot":

**Select "Advanced Options":**

Select "Start-Up Settings":

Select the Restart button:

Press either the F7 key or the <u>number 7 key</u> from your computer keyboard. This disables the Driver Signature Enforcement, which will allow you to install a printer driver. After pressing either key, your computer will reboot:

After your PC reboots itself, log in as normal and run the driver executable from the software CD.

* All these steps have been tested on the 64 bit version of Windows 8.
